

Extend

Design your own 'scaling up' task. Here is my guidance, but create your own ideas!

- Perform some kind of task where you can work out the number of 'somethings' you can do in a set time. This is the answer to your question.
- Show how many of your 'somethings' you can do for the first few seconds.
- Create your question!

Note: in some contexts we may expect you to keep going at approximately the same speed for a long time, e.g. skipping. For some actions we may expect your speed to slow down, e.g. doing press-ups.
